CERTIFICATE OF COMPLIANCE

REWORK MATERIAL

Spears® Manufacturing Company utilizes clean rework material during the manufacturing process for the production of new products. Clean rework material is generated in-house from runners and sprues during the injection molding process. This is virgin material kept in-house, stored in appropriate containers until its reuse. At no time, are any externally produced or commercially recycled materials used in our products. All products produced from rework material meets all requirements of applicable ASTM specifications.

A handwritten signature in black ink, appearing to read 'Gregory Peak', is written over a light grey background.
